

Bubble Machine

Using the soap in the Machine:

*On the front of the machine there is a screw that needs to be loosened so the top of the machine comes off. That will gain you access to where the soap will be put. Put it in the tray.

*Use dish soap (Dawn or something like that) Put the soap in and add some water to get a good consistency.

*After putting the soap in please sure that you don't move it around too much because the soap cannot get on the motor.

*After you are done make sure that you take the tray out and remove and wash out the tray and dry it before replacing it.
